TE-RD – DIESEL SITE PUMP

From the well-known TSURUMI pump brand, the TE-RD series is a range of diesel centrifugal drainage pumps.

All the pumps within this range are self-priming and come with outstanding Subaru-Robin diesel engines which are compact but can really pack a punch when needed. The TE-RD pumps can transport both black and clear water.

This range of pumps are commonly found in hire fleets and the construction industry. They are also used in applications such as drainage, utilities, flood defence, transfer and more.

The cast iron impellers and volutes ensure that the resistance to abrasion is optimized. The pumps have got aluminium pump housings and mechanical seals that are made from carbon ceramic.

Each model in the TE-RD series comes with a tubular steel carry frame, making portability easy. The suction lift runs at a max of 8m, however, it is advisable and recommended to only use 6m or less.

This series of pumps allow you to benefit from the lower cost of diesel run pumps, while still getting the same outputs as you would from their petrol equivalents.
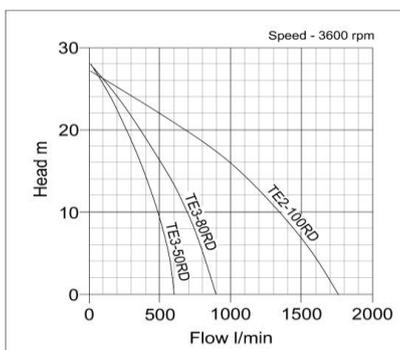

Each of these pumps comes equipped with washers, clips, strainers and hose couplings. There are optional extras you might want to consider, such as the hose itself, or a two-wheeled trolley which makes manual handling a breeze.

TE4-50RD

TE4-80RD with trolley

Suitable for:

- Flooding / Flood Defence
- Site Drainage
- Construction / In Water works
- Utilities
- Transfer

Model	Inlet (mm)	Outlet (mm)	Engine	Fuel	HP	Flow (l/min)	Head (Mtrs)	Solids (mm)	W x l x h (mm)	Dry Weight	Packing Weight
